Need to do things a little differently—No problem!

Do you find that you need just a little more flexibility than a basic, vanilla setup. Well, EazyScan allows you to handle any number of additional fields and logic before posting. Some examples are below:

- Is your source warehouse fixed-make it defaulted and invisible to the user
- Do you want to pass a reference-do it automatically
- Do you want to the operator to enter a reference-allow a reference to be scanned
- No lots-no problem. Don't ask for a lot number

Interested in Other Transactions

See our other brochures for details of some of our other supported transactions. The most common are below but this list is not exhaustive:

- Bin To Bin Movements
- Expense Issues
- Inventory Adjustments
- Product Receipts
- Job Issues
- Job Receipts
- Backflush
